

EARTHWISE CELLULOSE DISPOSAL INSTRUCTIONS

The cellulose insulation is manufactured using clean Double-Lined Kraft (DLK). Both the corrugated box and the cellulose panels are certified for curbside recyclability by Western Michigan University, but are not compostable.

During the re-pulping process, the cellulose and Kraft remains are preserved and used as clean, recycled content for new paper-based recycled products.

Instructions about disposal

No separation of cellulose and Kraft paper is required for these panels to be placed in the blue bin, however it is recommended that the cellulose panels be removed from the corrugate box to ensure proper sorting at your local material recycling facility.

For proper recycling requirements in your area, please consult with your local municipality for instructions. If your municipality does not offer those services, there are online options, such as Earth911 or RecycleSearch, that provide tools to help you find recycling centers in your area.

*May not be recyclable in all areas. This Kraft-lined insulation is patented.
